

Profile

Computer Engineering diploma graduate who ships full-stack ML products end-to-end - from a live client platform with an AI recommender engine to a brainwave-to-text classifier hitting ~92% accuracy. Comfortable owning a project from raw data to deployed interface, not just the model in isolation.

Education

Diploma in Computer Engineering, SVKM's Shri Bhagubhai Mafatlal Polytechnic and College of Engineering, Mumbai

June 2026

Aggregate: 96.47%

10th Grade, ICSE, NSM School, Mumbai

March 2023

Percentage: 94%

Skills

- **ML & Data:** Scikit-learn, TensorFlow/Keras, NumPy, Pandas, OpenCV, Signal Processing
- **Languages:** Python, JavaScript, TypeScript, SQL, C, C++, Java
- **Web & Full-Stack:** React, React Native, FastAPI, Flask, MERN Stack, HTML, CSS, Frappe
- **Backend & Infra:** PostgreSQL, Redis, Celery, Docker, Temporal, MySQL
- **Tools & Hardware:** Git, Arduino, Raspberry Pi, Blender

Projects

- **Brainwave-to-Text** - EEG Signal Classification 2024
Python, Machine Learning, Signal Processing
 - Designed an end-to-end EEG classification pipeline - raw signal ingestion, feature extraction, neural pattern classification - hitting ~92% accuracy mapping cognitive states to text output.
 - Proved out a real-world brain-computer interface use case entirely solo, from signal theory through to a working model.
- **ArtVista** - Sponsored Client Project 2024–25
HTML, CSS, JS, Python, AR (Scene Viewer), ML (Recommender System)
 - Shipped a full-stack AR commerce platform for a live client as sole developer, owning architecture, model training, and the deployment pipeline across a 5-layer stack.
 - Trained and integrated a Python-based recommender system that personalises painting suggestions per user, turning a static catalogue into a discovery-driven storefront.
- **Blood Donation Management System** - 1st Runner-Up, Ignite IT 7.0 2024
Full-Stack Development
 - Architected and shipped a complete donor-matching system in a 24-hour hackathon - real-time availability search, donor-recipient matching logic, emergency coordination workflows - ranking 1st Runner-Up against the full field.
 - Owned both backend logic and frontend interface single-handedly under a hard time constraint, with zero cut corners on functionality.
- **Spiking Neural Networks** - Technical Review Paper 2024
Neuromorphic Computing, AI Research
 - Authored a technical review spanning SNN architectures, neuron models, encoding methods, and neuromorphic hardware (Intel Loihi), now in preparation for journal submission.

Experience

- **Full-Stack Development Intern** - Agkiya Technology and Consulting LLP, Mumbai Dec 2025 –Jun 2026
 - Owned 6+ end-to-end modules on a full-stack, AI-powered business platform - inventory management, quotation generation, sales dashboards, automated document generation - in Python, FastAPI, React, and TypeScript.
 - Architected backend data handling and async processing with PostgreSQL, Redis, and Celery; orchestrated workflows with Temporal and containerized services with Docker.
 - Translated ambiguous business requirements into shipped features by working directly with cross-functional teams, and mentored incoming interns on codebase structure and Git workflow.
- **Operations Intern** - 3Folks Media, Mumbai Jun 2025 (1 month)
 - Built a vetted pipeline of 277+ content creators across niches by scouting and evaluating candidates against brand campaign fit.
 - Wrote reel concepts and translated scripts English-to-Hindi, keeping tone and messaging consistent across every client campaign.

Leadership & Activities

- Design Head, Spectrum 3.0 • Documentation Head, Spectrum Hackathon • Volunteer, Spectrum 2.0 & Enigma
